

**More than cooking.**

# We bring together what belongs together.

The BORA compact systems BORA S Pure, BORA Pure and BORA X Pure: Cooktop and extractor in a single product, suitable for any kitchen.

What's special about it: A functional unit was made from a high-performance cooktop and effective cooktop extractor. This compact combination of cooktop and cooktop extractor is preset and is available in an exhaust air or recirculation model. Planning and installation are very quick and easy.

BORA compact systems can be installed in minutes and are ready to use immediately. Thanks to the central operating panel, the full depth of the cooktop can be used. This means that BORA compact systems provide more room for pots and pans than other compact systems.

Another clear advantage of the recirculation models of the compact systems is the storage space in the floor unit. No space is lost as drawers do not need to be shortened, plinth heights are variable and floating worktops are just as possible as a barrier-free kitchen design. Installing the recirculation version of the BORA compact systems can give you up to 30 percent more storage space in the floor unit than if recirculated air is conducted into the plinth area, making this solution particularly interesting for smaller kitchens.

## The BORA compact systems in a nutshell:

- A combined cooktop and extractor system
- Thanks to the central operating panel and optimum arrangement of a round cooktop extractor in the middle, there is always plenty of room for cooking
- At under 200 mm, the low installation height and integrated recirculation unit guarantee maximum storage space for pots and other kitchen utensils in the cupboard below. Even in 60-cm-deep kitchen units, no drawers need to be shortened in recirculation mode. A change from the norm.
- Easy cleaning thanks to the round opening and easy-to-remove filter
- Installation plans prepared faster and more easily for kitchen planners
- Quick and easy to plan and install. Retrofitting of a recirculation system into an exhaust air system or vice versa possible at any time
- Kitchen planners only need to place one order
- Ideal for kitchen buyers who are looking for a simple, compact system at the right price

## BORA TECHNICAL SUPPORT

In our technical support department all employees have extensive experience in customer service and orientation. They are active members of our office and field staff. Our colleagues in the office are a highly competent point of contact when end customers need help with our appliances, for whatever reason. Often, error analysis over the phone is enough to solve the problem promptly without the need to send someone out. The service technicians in the field, on the other hand, process and perform service tasks face to face, representing BORA in person.

In the event of any queries, please contact our technical support team: [support.apac@bora.com](mailto:support.apac@bora.com), T +61 2 97 192350
